No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

Novel insecticidal proteins CrylJd, Cry9Fa and Cry1Bf, derived from Bacillus thuringiensis, useful for controlling insects in plants.

Claim 5; Page 30-36; 65pp; English.

The present sequence encodes CrylBf, an insecticidal protein derived from Bacillus thuringiensis. The specification also describes Cryld and Cry9Fa. The Cry proteins have actificatist lepidopteran and cloopteran insect pests. Cry1Bf, Cry1Ad and Cry9Fa polynucleotides and

The sequence encodes a B. thuringlensis Lepidopteran-active delta-
c andotoxin, crystal protein CryEr64. The Lepidopteran-active B.
thuringlensis delta-endotoxin polypeptides may be used as compositions
that are applied to plant crops to protect them from insect damage. The
polymuclectides may be used in the production of transgenic plants that
express the insecticidal polypeptides and consequently have improved
insect resistance compared to non-transformed plants. Monocotyledonous or
cotyledonous plants may be protected in this way, for example corn,
wheat, soybean, oat, cotton, rice, rye, sorghum, sugarcane, fomato,
tobacco, kapok, flax, potato, baley, turf grass, pasture grass, berry,
cobacco, kapok, flax, potato, baley, turf grass, pasture grass, berry,
fruit, legume, vegetable, ornamental plant, shrub, cactus and/or tree
cell. A wide range of insects (e.g. gypsy moth, looper, tobacco budworm,
cotton leaf perforator and spruce budworm) may be affected by application
cotton leaf perforator and spruce budworm) may be affected by application
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 TCGAATCATTCCACACAAATGGATCTATCACCAGATGCTCGTATTGAGGATTCTTTGTGT 120

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      ઠે
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            The present sequence encodes a 158C2c toxin from Bacillus thuringiensis. The present invention describes isolated nucleic acid sequences encoding toxins active against lepidopteran insects. The present invention also describes a recombinant host transformed with a nucleic acid sequence encoding a toxin. The nucleic acid sequence can be amplified. The product lepidopteran pests. N.B. The numbers in the sequence listing do not correspond to the SEQ ID No: 4, 5 and 6 are said to correspond to the sequences encoding the toxins, and SEQ ID No:7, 8, 9 and 10 are said to correspond to the amino acid sequences of the toxins, whereas in the sequence listing the amino acid sequence is given after the nucleic acid sequence listing the amino acid sequence is given after the nucleic acid sequence encoding it (i.e. SEQ ID No:3 encodes SEQ ID No:9)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          120

                  This is the partial nucleotide sequence of the novel delta-endotoxin 1582Cc gene of Bacillus thuringiensis (B.t.) isolate PSISBC2 (NRRL B-18872). To isolate novel toxin genes from PSISBC2, total cellular DNA was subjected to PCR amplification using primers (see AAA89222-23) based on conserved sequences of B.t. toxins. The PCR products were used as probes to screen a PSISBC2 gene library. Plasmid subclone pMYC2383 was obtained which contained the entire coding sequence for 158C2c (see AAA8921), the 3 portion of the 158C2b gene (see AAA89220) and the 5' portion of 158C2b pMYC2387. These novel genes encode delta-endotoxins (see AAB9218). that are active against lepidopteran pests. Expression in transformed plants confers resistance to such pests, while transformed microorganisms expressing the delta-endotoxins can be applied to sites where they will

delta-B.

The sequence encodes a B. thuringiensis Lepidopteran-active endotoxin, crystal protein CryET54. The Lepidopteran-active

Claim 17; Page 168-169; 173pp; English.

```
thuringiensis delta-endotoxin polypeptides may be used as compositions that are applied to plant crops to protect them from insect damage. The polynucleotides may be used in the production of transgenic plants that express the insecticidal polypeptides and consequently have improved insect resistance compared to non-transformed plants. Monocotyledonous or dicotyledonous plants may be protected in this way, for example corn, wheat, soybean, oat, cotton, rice, rye, sorghum, sugarcane, tomato, tobacco, kapok, flax, potato, barley, turf grass, pasture grass, berry, fruit, legume, vegetable, ornamental plant, shrub, cactus and/or tree cell. A wide range of finsects (e.g. gypsy moth, looper, tobacco budworm, cotton leaf perforator and spruce budworm) may be affected by application of the insecticidal polypeptides (full details given in specification). Note: The present sequence does not have a cryET number assigned to any Seq.ID number, the indexer has matched the spare sequence to the spare cryET number, which may be incorrect
                                                                                                                                                                                                                                                                                                                                                                        a,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                            120
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             120
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                180
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               180

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           420
B. thuringlensis strain EG5847 exhibits insecticidal activity against lepidopteran insects. Two novel toxin genes from B. thuringlensis EG5847 designated cryET5 produce insecticidal proteins with activity against a broad spectrum of lepidopteran insects. The gene sequences are given in AAQ64111-12
                                                                                                                                                                                                                                                                                                                                            CTTGCTCGATTACAAGGTTTAGGAGATTCCTTTAGAGCCTATCAACAGTCACTTGAAGAT

This invention describes novel transformed plants containing Bacillus thuringiensis strain EGS847 insecticidal crystal protein genes cryET4 or cryET5. cryET4 and cryET5 are novel toxin genes which produce insecticidal proteins with activity against a broad spectrum of insects of the order Lepidoptera. This sequence encodes the cryET5 protein described in the method of the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         67 TIGACTICAAATAGGAAAAATGAGAATGAAATTATAAAATGCTITATCGATTCCAACGGTA

CryET5 is especially useful for controlling Lymantia dispar, Ostrinia nubilalis, Pseudoplusia includens, Plutella xylostella, Spodoptera exigua, Spodoptera frugiperda
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       9

```
This sequence represents the cryETS gene of Bacillus thuringiensis (B.t.) isolate BCS5847. B.t. produces inclusions during sporulation which include insecticidal crystal proteins (ICP). ICP toxins are active in insects only after ingestion. Once ingested, the toxic components disrupt the

midgut cells, resulting in cessation of feeding, and eventually death. The CryI proteins produced by B.t. are active against lepidopteran insects. The protein encoded by this sequence, and the CryET4 protein (see AAW17700) belong to the CryI family of ICPs. This sequence can be used to transform bacteria, which are useful as insecticides against a wide range of lepidopteran pests, and can be applied to crops, soil and seeds. The encoded protein, or especially its toxic N terminal region, can be expressed in plants, to provide protection against lepidopteran pests. This sequence, or its fragments, can also be used to isolate other similar genes.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  600
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  999
                                                                                                                                                                                                                                                                                                                 The present sequence encodes a CryET5 protein. The protein is isolated from a new strain of Bacillus thuringiensis (B.t.), strain EGS847 (NRL 1-2110). EG5847 contains two new crystal toxin genes (cryET4 and cryET5) that produce proteins active against Lepidoptera. CryET4 is more active than CryIA(a) against Helicoverpa zea, resistant-strains of Plutella active active than CryIB against Efrugiperda, while CryET5 is more active than CryIB against S. frugiperda and Trichoplusia ni (and both are active against additional insect species)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             9

                                                                                                                                                                                                                                                                                                                                                                                                                      This invention relates to a novel polymucleotide sequence optimised for expression of an insecticidal protein in a plant. The invention may be useful for the production of pesticides whilst the disclosed sequences may be useful for gene therapy. The polymucleotide sequence and methods are useful in the control of lepidopteran insect pests, and for producing transgenic plants with the ability to resist insect infestations. The invention provides polymucleotide sequences with enhanced, improved and optimised expression in monocot and dicot plant species. The present sequence is that of the (partial) B thuringiensis crylBb gene which is

The hybrid toxins of the invention, whaving structural domains I, II and III in this order starting from the Naving structural domains I, also at I at 1 and III in this order starting from the N -terminal derived from at least 2 different crystal proteins, are useful for protecting plants against pest insects, e.g. moths, butterflies and Colorado potato beetle or for combating insects
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               New hybrid Bacillus thuringiensis hybrid toxins comprising structural domains derived from at least 2 different crystal proteins, such as Crylla and CrylBa, and having insecticidal activity, useful for combating
                                                                                                                                                                                                        Crystal protein; Crylla; CrylBa; moth; butterfly; Colorado potato beetle; ds; mutant.

The present sequence encodes for 1 of 3 novel hybrid insecticidal toxins (AAU00419-AAU00422) and is designated BBCI5. BBCI5 comprises domains I cand II from the Crylae toxin at the Crylae and Crylca toxin at the Crylae and Crylca toxin domains I corresponds to PFCI residues 446-454. In the 1221 amino acid FFCI hybrid corresponds to PFCI residues 446-454. In the 1221 amino acid BBCI3 and BBCI5 hybrid sequences, the juncture between the CrylBa and CrylCa toxin commains is residues 482-488 in the BBCI3 hybrid, and residues 491-494 in the BBCI5 hybrid. The hybrid toxins are useful for controlling and in vivo recombination. The hybrid toxins are useful for controlling and in vivo recombination. The hybrid toxins are useful for controlling and in vivo residue to be the two propers of the BBCI5 hybrid sylostella (diamondback moth), Ostrinia nubilalis insect such as Spodoptera frugiperda (fall armyworm), and Heliothis virescens (tobacco budworm) which are major causes of common to bore?), Spodoptera frugiperda (fall armyworm), and Heliothis virescens (tobacco budworm) which are major causes of cogramate plant by introducing the nucleotide sequence into the plant to preferably a transgenic plant. The nucleotide sequence into the plant corresponding the nucleotide sequence sequence used as an insecticidal agent. Baculoviruses engineered to coxin produced used as an insecticidal agent. Baculoviruses engineered to coxin produced used as an insecticidal agent. Baculoviruses engineered to infect insects in vivo resulting in their death. The hybrid toxins have a companient toxins alone toxin can be used to greater toxicity level than either of their parent toxins alone
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            166
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   286

The present sequence encodes for 1 of 3 novel hybrid insecticidal toxins (AAU00419-AAU00422) and is designated BBC13. BBC13 comprises domains I and I from the Cryba toxin at the N-terminus joined to domain III from CrylCa toxin at the C-terminus. In the 1186 amino acid FFC1 hybrid corresponds to FFC1 residues 446-454. In the 1221 amino acid BBC13 and BBC15 hybrid sequences, the juncture between the CrylCa toxin domains corresponds to FFC1 residues 446-454. In the 1221 amino acid BBC13 and BBC15 hybrid sequences, the juncture between the CrylCa toxin domains is residues 482-488 in the BBC13 hybrid, and residues 491-494 in domains is residues 482-488 in the BBC13 hybrid, and residues 491-494 in corresponds to the hybrid toxins are constructed by cloning and in insect such as Spodoptera exigua (beet armyworm), Manduca sexta (tobacco hornworm), Plutella xylostella (diamondback moth), Ostrinia nubilalis (Butchis virescens (tobacco budowrm) which are major causes of sequences encoding the hybrid toxins are useful for producing an insectrespect corresponds to the plant to resistant plant by introducing the nucleotide sequence into the plant preferably a transgenic plant. The nucleotide sequence into the plant corresponds in miscrocorganisms such as a virus, bacterium and fungus and the expressed in microorganisms such as a virus, bacterium and fungus and the coxin produced used as an insecticide agent. The hybrid toxin can be used to infect insects in vivo resulting in their death. The hybrid toxins have a cinfect insects in vivo resulting in their death. The hybrid toxins have a cinfect insects in vivo resulting in their death.
                                                                                                                                                                    control;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Novel hybrid insecticidal toxin useful for controlling insects such as Spodoptera exigua and Plutella xylostella, comprises domains I and II from CrylF or CrylB toxin joined to domain III from CrylC toxin.

Patent No. 5723758
GENERAL INFORMATION:
APPLICANT: Payne, Jewel
APPLICANT: Cummings, David A.
APPLICANT: Cannon, Raymond J.C.
APPLICANT: Stelman, Steve
TITLE OF INVENTION: No. 5723758el Bacillus thuringiensis Isolate Denoted
TITLE OF INVENTION: B.t. PS158C2, Active Against Lepidopteran Pests, and Genes
TITLE OF INVENTION: B.c. Psibsc2, Active Against Lepidopteran Pests, and Genes
NUMBER OF SEQUENCES: 10
CORRESPONDENCE ADDRESS:
                 3660
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           TCGAATCATTCCACACAAATGGATCTATCACCAGATGCTCGTATTGAGGATTCTTTGTGT 120
